www.vetriproline.com

Derma 3.6.9.™ supports a healthy skin and coat with essential fatty acids, vitamins and amino acids in a convenient, flavorful soft chew.

### INGREDIENTS OF INTEREST:

# > Omega 3, 6 and 9

Essential fatty acids support circulation, cellular integrity and functionality, as well as skin elasticity, texture, and a shiny coat.

### Biotin

Biotin is a sulfur-bearing vitamin that has been established as a vital ingredient for skin health. It is necessary for cell growth, production of fatty acids, and metabolism of fats and amino acids.

# Ascorbic acid (Vitamin C)

Vitamin C supports collagen production, contributes to skin texture and resiliency, and helps defend the skin from damage as a result of oxidative stress.

# > Methionine and L-cysteine

Methionine and L-cysteine are amino acids, which are essential building blocks for proteins. Both of these ingredients support skin tone and elasticity, and act as antioxidants to protect against skin-damaging free radicals.

# Zinc

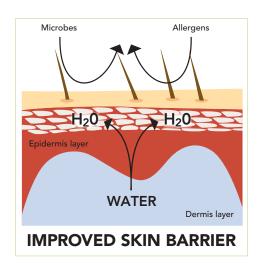

Zinc is a critical mineral for the body's immune and repair processes. It is required for collagen production, elastin synthesis, and DNA repair and duplication. Zinc is also necessary for the production of superoxide dismutase, which is a powerful skin antioxidant.

## Vitamins A and E

Vitamins A and E are antioxidants that help protect against oxidative stress and free radical damage.

# > Pyridoxine hydrochloride (Vitamin B6)

Vitamin B6 aids in the manufacture of proteins, and it is needed for the transfer of amino acids into the cellular interior to establish and maintain good skin condition. A deficiency of B6 impairs skin production and health.

### **FEEDING DIRECTIONS:**

0-30 lbs:
31-60 lbs: 2 chews daily
61+ lbs: 4 chews daily

For cats that are finicky eaters, break or cut chews in half.
