VETERINARY STRENGTH

ENTERO FLORA PRO

New Look, Same Great Formula!

Powder probiotic, 8 live strains, 10 billion CFU per serving

Single formula for both canine and feline

Odorless, tasteless, no animal proteins-great for allergies and pets with diet sensitivities

30-120 doses per jar, depending on animal's weight

18 month shelf life, refrigerate only after opening

Recommended for:

- Gastrointestinal support In conjunction with allergy treatment
- Weaning
- After GI surgeryDuring and after
- antibiotics

NET WEIGHT: 2.12 OZ (60 G) | 090094F.060

GUARANTEED ANALYSIS PER SERVING (1 GRAM):

Gut Health

NET WEIGHT: 2.12 OZ (60 G)

Gut Health is a proprietary multi-strain probiotic powder with prebiotic fructooligosaccharides (FOS) to support digestion, regularity and healthy digestive and immune systems in dog and cats.

This unique probiotic supplement contains:

- A complete formula with 8 strains of live probiotic bacteria, carefully selected to help restore the beneficial microbiota in dogs and cats
- A highly concentrated blend of probiotic microorganisms per serving* (10 billion CFU/gram) for superior support
- Prebiotic soluble fiber (FOS) to stimulate the growth of good bacteria, improve nutrient digestion and maintain normal GI balance and regularity

Benefits of probiotic treatment for dogs and cats:

- Promotes healthy digestion, nutrient absorption and regularity
- Helps prevent undesirable bacteria from growing to a population large enough to cause health challenges
- > Supports healthy immune system function

Ingredients of interest:

Six Lactobacillus strains with proven health benefits for pets

Lactobacillus acidophilus

L. acidophilus has been shown to support healthy weight and growth in young dogs, and provide a range of systemic and immune modulating effects in cats. Tests revealed decreased urine oxalate concentrations in vitro, suggesting health benefits in pets with a history of urinary stones.**

Lactobacillus casei, Lactobacillus delbrueckii and Lactobacillus plantarum

 Research studies suggest the beneficial properties of L. casei, L. delbrueckii and L. plantarum against undesirable bacteria both in vitro and in vivo systems, and specifically in regards to UT health.

Lactobacillus reuteri

L. reuteri have been identified as predominant species in the intestinal tract of dogs, making it especially suitable for canine health. L. reuteri has been identified also as a remarkably bile-resistant probiotic bacteria.

Two beneficial Bifidobacterium strains

Bifidobacterium bifidum and Bifidobacterium longum

> Bifidobacterium and Lactobacillus species together are the prevalent beneficial bacteria in feline gut microbiota. Bifidobacteria offer a broad range of health properties both in humans and animals, including support for vitamin synthesis, digestion of carbohydrate and immune response in the gut.

Fructooligosaccharides (FOS)

- Research shows that fructooligosaccharide supplementation supports healthy gut microbiota composition in dogs and cats. Additionally, in senior cats, FOS modulates stool odor-forming compounds.
- > FOS are well known to promote fecal bulk and normal transit time in pets.
- Administration of FOS promotes a slightly lower pH (more acidic) in the large intestine, which supports the absorption of beneficial minerals such as iron, calcium, phosphorus, and magnesium.
